PROFESSIONAL SUMMARY

Microsoft-certified (PL-300) Power BI Developer with 4.5 years turning financial, medical-insurance, and supply chain data into decisions leaders trust. Strong across the full delivery stack — advanced SQL, Power Query ETL, star-schema modeling, advanced DAX, and Row-Level Security on Power BI Service — with hands-on Microsoft Fabric and Snowflake ELT. Specialises in **data reconciliation and validation**: proving a report's numbers match the source system before it reaches a client, not after. Built and shipped **DAX Workbench**, a registered Power BI External Tool that reconciles a live model against SQL Server and automates report delivery end to end.

FLAGSHIP PROJECT

DAX Workbench — Reconciliation, Validation & Automated Report Delivery

Live: dax-workbench.onrender.com

Registered Power BI External Tool | TypeScript · C# / .NET 8 · Power BI TOM & ADOMD · SQL Server

- **Reconciliation engine — proves the report matches the source:** compares a live Power BI model against SQL Server side by side at any grain (row counts, nulls, duplicate keys, date coverage, orphan keys), then drills Year → Month → Product to pinpoint exactly where the numbers break. Catches offsetting errors that leave the grand total correct and the detail wrong.
- **Refuses rather than guesses:** a truncated read, zero key overlap, or an empty side blocks the comparison instead of reporting a confident green. “Could not run” is a third outcome and is never folded into “passed” — every run exports an HTML / CSV evidence pack for sign-off.
- **Automated dashboard delivery, gated end to end:** AI-assisted pipeline takes a folder of CSVs through 11 stages — profiling, star-schema design, ETL, TMDL model, DAX, report authoring, QA — to a Git commit. Each stage must clear a validation gate before the next begins, and every measure is verified on the live Power BI engine and reconciled to source control totals, not syntax-checked.
- **One click from Power BI, built solo:** launches from the External Tools ribbon against the open model; generates, benchmarks and deploys DAX directly. 17,000+ lines of TypeScript with a C# / .NET 8 service, 385 automated tests, CI/CD releases. Runs fully offline — no data leaves the machine.

TECHNICAL SKILLS

BI & Visualization: Power BI Desktop & Service, DAX, Power Query (M), Microsoft Fabric, Data Modeling, Star Schema, Bridge Tables, Row-Level Security (RLS), KPI Dashboards, Drill-through, Tooltip Pages, Bookmarks, Field Parameters, Deneb (Vega-Lite) Custom Visuals.

Data Quality & Validation: Source-to-report reconciliation, control totals, grain-level variance analysis, duplicate & orphan-key detection, referential integrity checks, data-freshness validation before publish, audit-ready evidence reporting.

Databases & SQL: Advanced SQL — Window Functions, CTEs, Complex Joins, Subqueries, Views, Stored Procedures, Query Optimization & Performance Tuning; SQL Server.

Data Transformation: ETL & ELT Pipeline Design, Incremental Loads, Slowly Changing Dimensions, Fabric Deployment Pipelines, Dataverse, Data Warehousing Concepts, Dimensional Modeling, Data Cleansing.

Supply Chain Analytics: Supplier-to-customer flow (purchasing, inventory, sales, delivery); OTIF, Fill Rate, Inventory Turns & DIO, Stock-out & Excess Inventory, Supplier Lead Time & Defect Rate, Purchase Price Variance, Supply Chain P&L bridge.

AI & Automation: AI-assisted development (Claude), prompt engineering, LLM integration, OCR & NLP pipelines, workflow / DAG design, automated report generation, CI/CD deployment, full-stack web apps.

Programming & Tools: Python (Pandas, NumPy), SQL, TypeScript, Excel (Advanced Formulas, VLOOKUP/INDEX-MATCH, PivotTables, VBA Macros), Git/GitHub, VS Code.

Cloud & Platforms: Snowflake — architecture (virtual warehouses, storage/compute separation, micro-partitions) and ELT pipeline design; Microsoft Fabric; Power BI Service, Workspace Governance & RLS.

Domain Expertise: Medico-Legal Data, Healthcare Analytics, Insurance Claims, Supply Chain (pharmaceutical), Data Security & Governance.

PROFESSIONAL EXPERIENCE

Senior Medical Data Associate (Power BI Role)

Dec 2022 – July 2026

Bolster Legal (Jacoby & Meyers) | US-based Medico-Legal Firm | Remote (India)

- Designed and deployed 14+ interactive Power BI dashboards tracking case progress, medical timelines, and financial KPIs; published and managed via Azure-hosted Power BI Service with scheduled refresh, improving operational visibility by 40%.
- Built reconciliation and validation checks into the reporting process — tying dashboard figures back to source SQL control totals before publishing — which stopped number disputes reaching the client and cut rework on live reports.
- Built complex DAX measures and calculated columns (time intelligence, RANKX, dynamic measures) over star-schema models with optimized relationships for high-performance reporting across large datasets.
- Engineered robust ETL using SQL (complex joins, CTEs, subqueries, stored procedures) and Power Query to cleanse and structure raw data from databases, APIs, and FTP sources into centralized analytical systems.

- Owned production support for 14+ live dashboards — triaging refresh failures, resolving access escalations, and fixing root causes with documented resolutions.
- Designed and built internal AI-assisted automation tools — an OCR/NLP medical-record extraction engine, a PDF hyperlinking system, and a schema-driven data-validation and code-generation app — cutting manual document-review and reporting effort by up to 60%.

Junior Data Analyst

Mar 2021 – Nov 2021

Amable Consultancy Services Pvt. Ltd | Mohali, India

- Processed and validated insurance-claims data for pharmaceutical supply chain clients, maintaining 99%+ accuracy and full regulatory compliance.
- Performed advanced data cleaning and validation using Excel (VLOOKUP, INDEX-MATCH, conditional formatting) and PivotTables; built reports for claim-volume tracking, TAT analysis, and financial reconciliation.
- Streamlined data-quality processes, reducing error rates by 35% and improving processing turnaround.

KEY PROJECTS

Supply Chain Control Tower — End-to-End Power BI Solution

Supplier to customer, synthetic dataset

- Power Query ETL into a star schema (4 facts, 5 dimensions; ~20K order lines, ~9K shipments, ~1K supplier POs, ~9K inventory snapshots) with 100+ DAX measures across purchasing, inventory, sales and delivery; also loaded to SQL Server with keys, foreign keys and validation views.
- Advanced DAX: thresholds-table-driven On Track / Watch / At Risk status, a field-parameter metric selector with prior-year comparison, and a disconnected-table P&L engine; every headline KPI reconciled to source. Findings: OTIF 85% vs a 95% target, 52% of purchase spend with high-risk suppliers.

MSP Management Accounts — End-to-End Power BI Solution

Repo: github.com/kumar98rishav-oss/powerbi-msp-management-accounts

- Complete management-accounts solution on synthetic finance data: SQL/Power Query ETL, star schema with a bridge table, 60+ DAX measures, and 6 report pages (P&L, profitability, utilisation, balance sheet, client ledger) secured with USERPRINCIPALNAME()-based dynamic RLS — every client, service and month reconciles to the audited totals.
- Built an interactive HTML dependency / value map tracing every figure from a single billable hour through utilisation, the P&L and the balance sheet — six linked views with plain-English insight per node, for client presentation and audit.

Medical-Legal Document Automation & Analytics

5 production tools, used daily by the firm

- **Mednex** — OCR + NLP engine converting unstructured medical-record PDFs into structured, chronological datasets and Word reports (FastAPI, PyMuPDF, SciSpacy).
- **SchemaForge** — schema-first data tool that ingests Excel/CSV, infers and enforces column types, validates data quality, and auto-generates Python / SQL / Power BI (M) code.

EDUCATION

Master's in Biomedical Engineering

2018 – 2020

Panjab University, Chandigarh | Gold Medalist

CERTIFICATIONS & ACHIEVEMENTS

- **Microsoft Certified: Power BI Data Analyst Associate (PL-300)** — Microsoft, 2026
- SQL (Advanced) — HackerRank, 2025 • Snowflake — Architecture & ELT Pipeline Design (in progress)
- Star Performer Award — 3 consecutive years • Excellence in Project Delivery (Client Recognition) • Process Improvement Champion (60% efficiency gain)
